PROFESSIONAL SUMMARY

AI Systems & Solutions Engineer with experience building production-grade AI systems, data platforms, and integration-heavy applications.

Specialized in translating business requirements into scalable technical systems involving LLMs, backend APIs, data pipelines, and cloud infrastructure.

Strong focus on system reliability, deterministic design, and production debugging in AI-driven environments.

CORE SKILLS

- **Backend & APIs:** Python, FastAPI, Flask, Express.js, REST APIs, Webhooks
 - **Frontend:** React, TypeScript, Angular
 - **AI Systems:** LLM APIs, RAG systems, LangChain, FAISS, OCR pipelines
 - **Data:** PostgreSQL, MongoDB, Firebase, Redis, Pandas
 - **Cloud & DevOps:** Google Cloud Platform, Docker, CI/CD, Cloud Run, Cloud Functions
 - **Integrations:** Stripe, OAuth, Google Maps API, Podio API, Twilio, ElevenLabs
-

PROFESSIONAL EXPERIENCE

MachineFlow

AI Systems & Solutions Engineer (2025 – Present)

External consulting role delivering AI, data, and integration systems for client-facing products.

- **Key Projects:**
 - **Real Estate Geospatial Platform**
 - Built map-based property system for 400+ real estate assets
 - Integrated CRM (Podio) with live spatial filtering and analytics
 - Implemented GeoJSON-based zoning, clustering, and map interactions
 - Reduced manual lead processing through automation and structured workflows
 - **AI Medical Workflow System (Design)**
 - Designed hybrid RAG + rule-based system for medical decision support
 - Focused on reducing hallucination risk and improving auditability
 - Structured pipeline for validated medical knowledge retrieval
 - **Education Assessment System (Independent Design)**
 - Designed curriculum-driven assessment generation architecture
 - Built deterministic question generation and grading model
 - Focused on structured, repeatable exam generation for schools

1001Epochs (Zurich, Remote)

Tech Lead / Software Engineer (2023 – 2025)

Worked on production AI systems, backend infrastructure, and education platforms.

- **Key Achievements:**
 - Built AI education platform used by 11,000+ students
 - Designed PostgreSQL schemas and scalable backend systems
 - Integrated Stripe billing + webhook automation system
 - Built RAG-based systems using FAISS + OpenAI embeddings
 - Managed GCP infrastructure and deployments
 - Implemented logging, monitoring, and alerting (Slack-based)
 - **Major Systems:**
 - Legal AI RAG system (document ingestion, embedding, retrieval)
 - AI FAQ / chatbot systems (Discord + TTS integration)
 - AI e-commerce recommendation system
 - Internal automation tools (Airtable + workflow systems)
 - **UniqLearn System (Production Collaboration):**
 - Built AI-driven assignment generation and grading system
 - Designed OCR + YOLOv8-based answer extraction pipeline
 - Implemented rubric-based automated grading system
 - Refactored system into modular cloud function architecture
 - Improved system reliability through caching and logging
-

EDUCATION

BSc Computer Science

Lebanese International University (2019 – 2022)

GPA: 3.5

KEY STRENGTHS

- End-to-end system design
 - Production AI system development (RAG, LLM workflows)
 - API integration and system orchestration
 - Debugging and stabilizing production systems
 - Translating business requirements into technical architecture
 - Working across ambiguous, fast-moving environments
-

NOTABLE IMPACT

- Built systems serving 11,000+ users
- Delivered multiple production AI workflows across domains (legal, education, real estate)
- Designed geospatial and AI systems used in real client environments
- Reduced operational complexity through automation and system redesign
